

# Half-time feedback

## Module Ecological Modelling, winter 2020/21

What should be maintained in the future?

the topics 1

the video lectures 1

I really like how the lectures are prepared, they are well made and you did a very good job on explaining and making sure that we understand that during tutorial as well, I think it should be maintained for the second half of the lectures 1

coordinated exercises with the lecture 1

nicey structured exercises 1

High amount of interactive tasks and discussions 1

Pre-recorded lectures in combination with opportunity to ask and hear other students questions 1

I enjoyed the Q&A, it was very helpful with the slides 1

the Q&A sections 1

Cooperative style and involvement of student's questions and ideas 1

I really appreciate the module being split into two parts, the tutorial and the lecture 1

interactive wednesday sessions (thank you also to max) 1

This module was handled very well in terms of the limitations regarding in presence classes 1

By now one of the best prepared and conducted online modules! 1

I think, I can learn a lot for future. Prior to the exam, I would appreciate a recap session with focus on the required knowledge for the exam. I guess, that's already planned :) 1

What could be improved in the future?

exercises on wednesday with little explanation of what we should know or not; and of what we are learning 1

I could prepare myself more for the online meetings and interact more... 1

For the tutorial on Wednesday, I hope that there will be a little bit more guided exercise on how to get used to the programming part of the NetLogo at the beginning, because most of us don't have a very strong programming background, and we don't know a lot of functions in NetLogo and they are not exactly the same with RStudio that we learned in previous semester 1

maybe provide the tutorial with more time for questions and difficulties. I always have trouble with my laptop and get lost at some point 1
