Provision of AI Services for Research and Teaching with GWDG and KISSKI and Efficient Storage Systems

Julian Kunkel, University of Göttingen and the Deputy Head High-Performance Computing at GWDG, Göttigen/Germany

Abstract: In this talk, we will first explore the possibilities and services offered by GWDG and KISSKI for research and teaching. This includes already available generative AI services such as ChatAI, as well as services for managing large data volumes for sensitive applications and future services and extensions. In the second part of the talk, we will present our own research in the field of high-performance storage and share our visions for the future of storage systems.
